Mary Kom Full Movie Download 240p HD Mp4 450MB Mobiles AVI MP3 that are 200MB. Efficacy and Safety of Canagliflozin in Patients With Type 2 Diabetes With Histopathologic Features of Immune Thrombocytopenia. To evaluate the efficacy and safety of canagliflozin in adult patients with type 2 diabetes (T2DM) who have histopathologic features of immune thrombocytopenia (ITP). Consecutive patients with newly diagnosed T2DM and a platelet count <150,000/ μ L within 2 months prior to screening were enrolled at 42 sites in North America, Latin America, and Western Europe. Patients were treated with canagliflozin or sitagliptin (control) for 48 weeks in a phase 2 study. Primary effectiveness end points were the proportion of patients achieving platelet count normalization by week 16 and the proportion of patients who achieved stable platelet count normalization by week 52. Among the 229 patients enrolled in the trial, 177 (78.7%) were female and the mean age was 54 years. By week 16, platelet count normalization was achieved in 76.4% (95% CI: 70.8-80.8) of canagliflozin-treated patients versus 45.3% (95% CI: 35.9-53.5) of sitagliptin-treated patients, and by week 52, was achieved in 85.9% (95% CI: 81.2-88.9) of canagliflozin-treated patients versus 50.3% (95% CI: 42.0-58.4) of sitagliptin-treated patients. No new or unexpected safety signals were observed. Canagliflozin was efficacious and generally well tolerated in adult patients with T2DM and a platelet count <150,000/ μ L. f988f36e3a
